Education

Game Development

Collegium Da Vinci (od 2023, studia licencjackie, w trakcie)

IT Technician

Zespół Szkół Zawodowych i Ogólnoszkształcących im. Kombatantów Ziemi Lubańskiej w Lubaniu (2018–2022)

Interests

My main interest is tech art and fine-tuning the visuals of games. I like to look for that "final touch" in VFX, lighting and post-processing that makes a difference in the reception of the game.

About Me

I am a Unity Developer, focused on the solid technical side of production. In Unity, I implement mechanics and gameplay systems and build tools that speed up the team's work and organize the process. In parallel, I develop the visual side: I prepare environments, lighting, and post-processing to improve the visual quality and readability of the game. My strength is my attention to code quality, scalability, and optimization. In the future, I want to develop as a Unity Developer in 2D and 3D projects and expand my technical skills.

Skills

Hard skills

1. Knowledge of C# and Unity environment.
2. Implementation of mechanics and gameplay systems.
3. Object-oriented programming and system architecture.
4. Profiling and optimizing project performance.
5. Knowledge of tech art including Shader Graph, post-processing and VFX effects.
6. Experience with version control system Git.

Soft skills

1. Communication skills
2. Independence
3. Problem-solving
4. Attention to detail
5. Flexibility

Activities

1. Student Research Club: Level UP (Collegium Da Vinci)
2. Student Research Club: Game Wizards (Collegium Da Vinci)
3. Game jam competition (POGJAM 2025) — podium finish

Experience

Internship: EYVI | 07.2025 - 09.2025

I worked on the game for the interactive table, implementing gameplay logic and a touch interaction system with recognition of physical tokens based on touchpoints with the screen. I was also responsible for asset integration and visual design, including VFX effects and post-processing.

Internship: Rubens Games | 07.2024 - 10.2024

I worked on two projects: Turbo Tire, where I created 3D models, prepared UV maps, and developed shaders, post-processing, and VFX effects. In the Purrrifiers: Cleaning Chaos DEMO project, I developed the main stain cleaning system using C#, compute shaders and shaders supporting workflow, as well as creating and integrating VFX and post-processing.

Internship: ITEGA | 06.2020 - 09.2020

I created and hosted websites in PHP. I also supported database management and environmental maintenance work.
